Testimonial for Internship of Shannen Lee

Period of Internship: 25-July-2022 to 9-December-2022

Dear Sir/Ma'am,

Ms Shannen Lee has worked directly under my supervision as a full-stack developer intern for our AI company, Amaris.AI Pte Ltd.

During her internship, she was exposed to the development, enhancement, maintenance and testing processes of both frontend and backend components in an AI-powered web service. She is heavily involved in refactoring both components in a highly complex project with a lot of disorganized code, as well as the removal of complex bugs and issues along the way. Despite the complexity and difficulty of the scope of work that was given to her, as well as her limited knowledge in React at the start, she was able to make headway and even perform at a level beyond her original scope of work.

Shannen has shown a lot of initiative and diligence in her work. She picked up React on her own at the start of her internship and has shown proficiency in it only after a few days of self-learning. Her careful explanations and documentation of the technical issues she encountered along the way, when reporting to various stakeholders, showcases her diligence and understanding of how to manage technical issues in a project. We are also very impressed by her initiative in raising and explaining technical issues and her ability to resolve them with minimal supervision, and her thoroughness in the testing process in making sure that the web service operates without any issues.

Hence, we wish her well and without hesitation, would recommend her for work in any area which involves software engineering or development, particularly in the areas of frontend, backend, or full-stack development, as she would excel and thrive.

Yours Faithfully,

Prof Yu Chien Siang
